

KORLOY Indexable New Generation Drill

KING DRILL

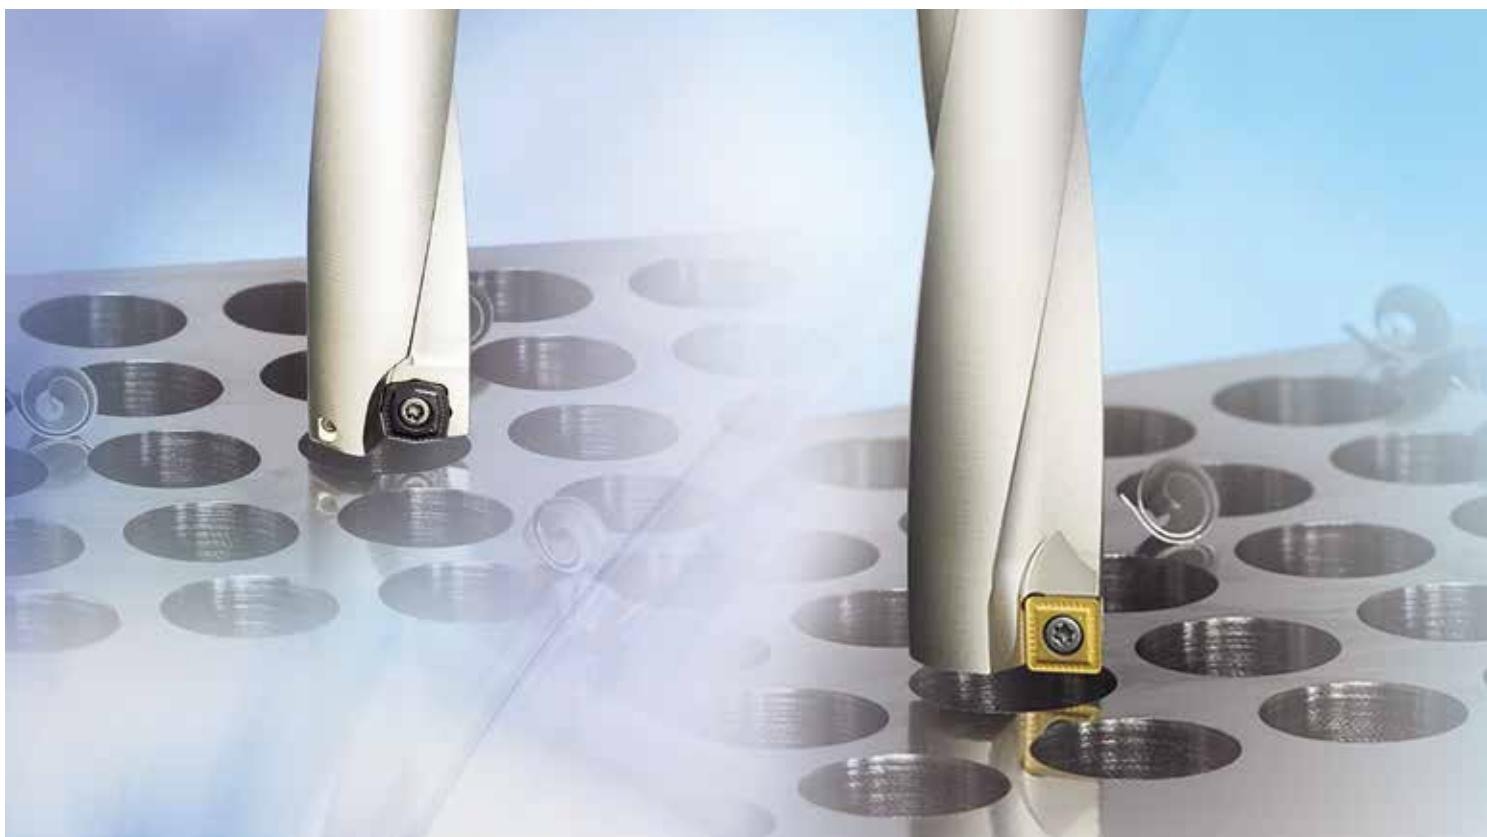

High Speed and High Efficiency Indexable Drill

Excellent Chip Control

Highly effective chipbreaker design for hole making applications.
Excellent chip control and surface finish due to optimized
insert geometries

Stable Tool Life

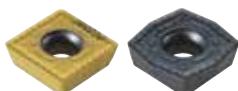

Optimized balance between cutting edges and grades
improves stability of tool life.

High Speed and High Efficiency Indexable Drill

KING DRILL 2D / 3D / 4D / 5D

Insert

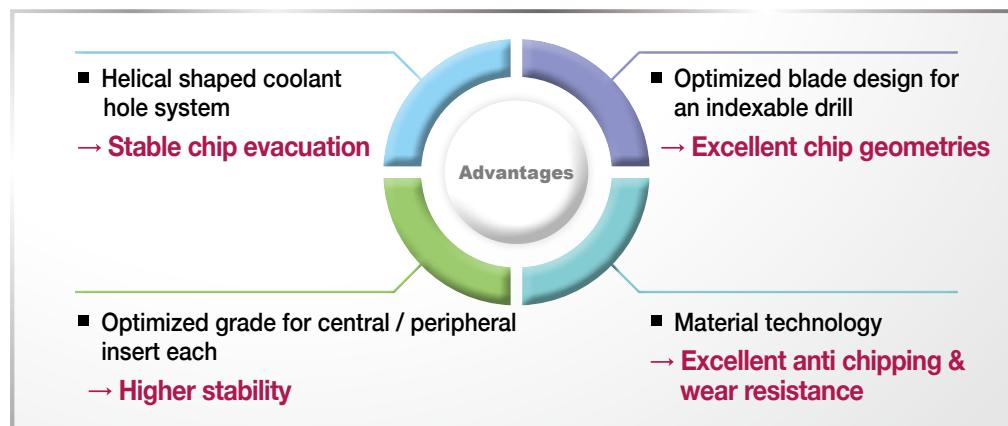

Unlike solid drills, most indexable drills used for general purpose drilling produce poor machining precision and imbalanced hole shape due to the asymmetric geometries of the inserts. This results in difficulties making holes that are deeper than three times the drill diameter (3D).

To solve this problem, both central and peripheral inserts and centering of the KING DRILL were specially designed to balance insert arrangement with grade optimization in order to effectively produce holes at five drill diameters (5D).

Optimized blade and flute design of the KING DRILL enhance effectiveness of drilling mechanisms due to superior chip formation and chip shape. The helical oil holes on the KINGDRILL produce smoother chip evacuation.

KING DRILL inserts are available in four chip breakers for a wide range of applications : PD for general purpose, LD for mild steel and hard-to-cut materials, ND for aluminum machining, and RD with reinforced central corners. The specialized geometries and grades of the central and peripheral inserts maximize performance and cutting tool life.

As a result, faster and higher stability significantly increase productivity and reduce tool cost.

➡ Features of Insert

■ Optimized design of inserts for maximum drilling efficiency

- Excellent cutting performance and chip control due to the optimized geometry and chip breaker of both inserts : central and peripheral
- A set of differently shaped central and peripheral inserts optimize the insert locations to maximize cutting tool life

Chip breaker	PD		LD		ND		RD
Feature	<ul style="list-style-type: none"> - Universal - Medium speed and medium feed 		<ul style="list-style-type: none"> - Superior chip control for machining mild steel and stainless steel - Light cutting(at low ~ medium speed and low feed) 		<ul style="list-style-type: none"> - Sharp cutting edge for aluminum machining - Insert surface buffed for high quality result 		<ul style="list-style-type: none"> - Improved chipping resistance - Excellent performance in case of frequent fracture and chipping on the cutting edge

➡ Features of Drill

Optimized Flute System - 2 Coolant Holes Applied

- The optimized shape of the flute increases the rigidity of the drill body and improves chip evacuation

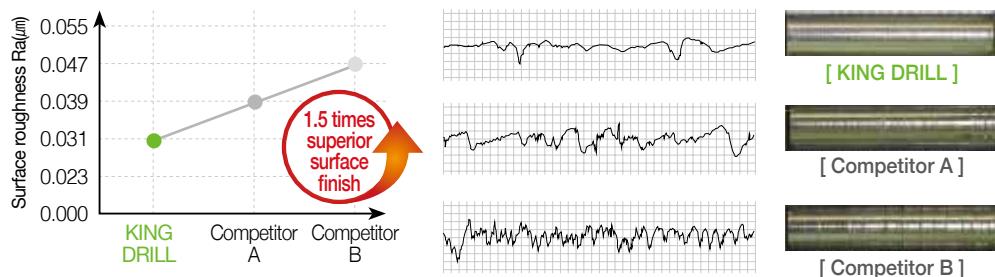

➡ Cutting Performance

Surface Finish

• KING DRILL shows superior surface finish compared to other competitors.

- Workpiece AISI4140
- Cutting conditions $v_c(\text{sfm})=492$, $f_n(\text{ipr})=0.0031$, Depth of drilling : 2.36inch(pass though), Through coolant system
- Tools Insert SPMT050204-PD (PC3500), XOMT050204-PD (PC5300)
Holder K5DA0562075HP-05

[KING DRILL]

[Competitor A]

[Competitor B]

⇨ Cutting Performance

- Workpiece AISI4140
- Cutting conditions $vc(sfpm)=492$, $fn(ipr)=0.0039$, Depth of drilling : 3.15inch(pass though), Through coolant system
- Tools Insert SPMT060205-PD (PC3500), XOMT060204-PD (PC5300)
Holder K5DA0875100HP-07

- As the test result shows, KING DRILL has higher wear resistance than competitors and provides the best tool life.

Evaluation of Wear Resistance

[KING DRILL]

[Competitor A]

[Competitor B]

- 320 Holes (94.5ft)
- Normal wear

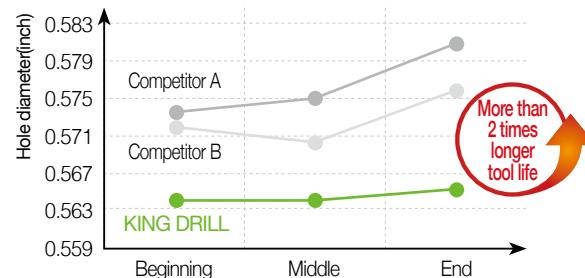

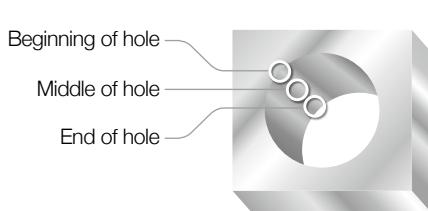

- 230 Holes (67.9ft)
- Chipping on cutting edge

- 140 Holes (41.3ft)
- Wear and chipping on cutting edge

- The diameters of beginning, middle, and end of hole are regular after drilling with KING DRILL.

Precision of Machining

- Workpiece AISI4140
- Cutting conditions $vc(sfpm)=492$, $fn(ipr)=0.0031$, Depth of drilling : 2.36inch(pass though), Through coolant system
- Tools Insert SPMT050204-PD (PC3500), XOMT050204-PD (PC5300)
Holder K5DA0562075HP-05

■ KING DRILL

- Regular hole diameters at the beginning, middle and end of hole

■ Competitor A

- Hole diameter : beginning < middle < end

■ Competitor B

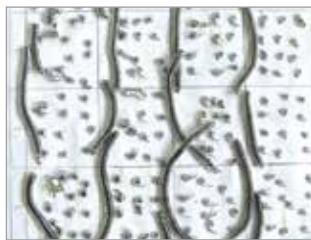

- Bigger hole diameter at the end of hole

→ Cutting Performance

- The test results clearly show that the KING DRILL's cutting performance is far superior to its competitors when it comes to chip evacuation.

Chip Evacuation

- Workpiece** AISI1045
- Cutting conditions** $v_c(\text{sfm})=295\sim590$, $f_n(\text{ipr})=0.0024\sim0.0047$, $t(\text{inch})=3.5$, Through coolant system, pass through
- Tools** Insert SPMT07T208-PD (PC3500), XOMT07T205-PD (PC5300)
Holder K5DA0812100HP-07

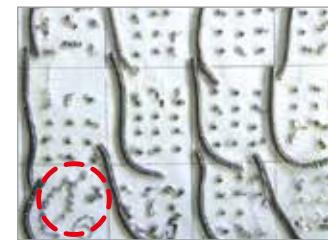

[KING DRILL]

- Stable chip control

[Competitor A]

- Thin and long chips are coiled around the holder.

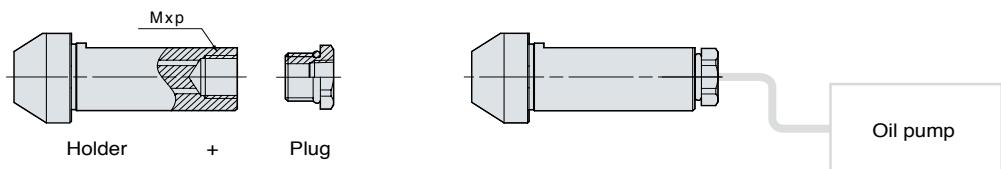

[Competitor B]

- Folded chips under certain cutting condition
- Poor chip evacuation

→ KING DRILL- With Through Coolant System for Lathe

- Drill with through coolant system for general lathe and CNC lathe without through coolant system

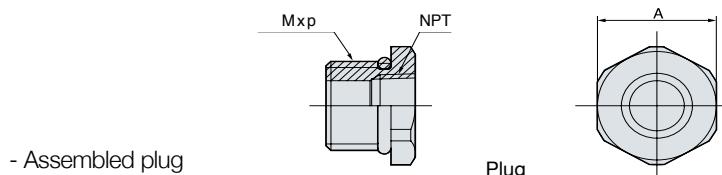

- Through coolant system with drill holder, plug, oil-hole hose and oil-hole pump
- NPT Tap in the plug is combined to NPT Tap connected to oil hose.
- Available to use the drill without a plug in milling machine.

- Clamping oil hose to the bottom of plug and connect the oil pump to the holder

(inch)

⇨ How to Clamp KING DRILL to Side Lock Arbor

■ Recommendation to use side lock arbor for KING DRILL

- Step ① :** Insert the drill with the side lock aligned to the bolts of the arbor.
- Step ② :** Push the plunge of the drill into the arbor.
- Step ③ :** Clamp Bolt 1.
- Step ④ :** Clamp Bolt 2.

⇨ Notice for Setting the Drill in the Lathe.

- Set the peripheral insert parallel to the X axis. (Based on the side lock.)
- To calibrate the drill to its ideal settings, the initial drilling depth should be at 0.2", in order to make the core dia. of 0.02" wide.
 - Note that the location of the side lock may vary depending on the lathe brand.

➡ Machining Required Attention

Workpiece	Machining	
	Machining irregular face	<ul style="list-style-type: none"> ■ Possible chipping and fracture of the insert. ■ Reduce normal feed 25%.
	Machining convex side	<ul style="list-style-type: none"> ■ Possible initial contact with central insert. ■ Reduce feed 50% until both inserts are engaged.
	Machining concave side	<ul style="list-style-type: none"> ■ Reduce feed 50% until both inserts are engaged.
	Boring	<ul style="list-style-type: none"> ■ Reduce feed 50% from normal conditions.
	Ramping	<ul style="list-style-type: none"> ■ Reduce feed 50% from normal conditions.
	Machining cross holes	<ul style="list-style-type: none"> ■ Reduce feed 50% in the overlapped section.
	Machining overlapped holes	<ul style="list-style-type: none"> ■ Reduce feed 50% from normal conditions.
	Machining overlapped panels	<ul style="list-style-type: none"> ■ Possible chipping and fracture of insert. ■ Reduce normal feed 25%.

➡ Solutions for Machining Failure

Failure	Detail	Solution
Different diameters of one machined hole	Different diameters of one machined hole → The end of hole Diameter is bigger	<ul style="list-style-type: none"> ■ Use more coolant and check the coolant evacuation. ■ Change the drill to one with small aspect ratio. ■ Change the cutting condition for better chip control.
Enlarging or reducing hole diameter	Enlarging or reducing hole diameter	<ul style="list-style-type: none"> ■ Milling → Use more coolant → Check the coolant evacuation ■ Turning → Check the center of drill and workpiece → Rotate the drill to 180°
Chattering	Vibration while machining	<ul style="list-style-type: none"> ■ Set the overhang of drill short. ■ Reduce the cutting speed and feed. ■ Stable clamping ■ Check the torque of machine.
Poor chip evacuation	Long chip	<ul style="list-style-type: none"> ■ Mild steel / STS → speed up, feed down.
		<ul style="list-style-type: none"> ■ Alloy steel / carbon steel → speed up, feed up.
	Short chip	<ul style="list-style-type: none"> ■ Speed down, feed down, pressure of coolant up.
Poor surface finish	Scratch on the machined side	<ul style="list-style-type: none"> ■ Set the cutting condition for better chip control. ■ Feed down or speed up. ■ Increase the coolant flow and check the coolant evacuation. ■ Set the overhang of drill short and more stable clamping.
Short tool life of insert	Too much wear or chipping on insert	<ul style="list-style-type: none"> ■ Check the cutting condition. ■ Use more coolant and check the coolant evacuation. ■ Set the overhang of drill short and more stable clamping. ■ Change the insert grade.

KING DRILL - For Large Diameter Drilling

- Cartridge type for Ø2.40~Ø3.94 drilling.
- Peripheral cartridge can adjust the drilling diameter within 0.197inch.
- Easy to adjust drilling diameter with adjusting bolt.

Adjustment of Drill Diameter

Adjustment Ø(inch)	Adjusting Washer	
	Designation	Width(inch)
0.04	WA0305	0.020
0.08	WA0310	0.040
0.12	WA0305 + WA0310	0.059
0.16	WA0310 x 2	0.079
0.20	WA0305 + WA0310 x 2	0.098

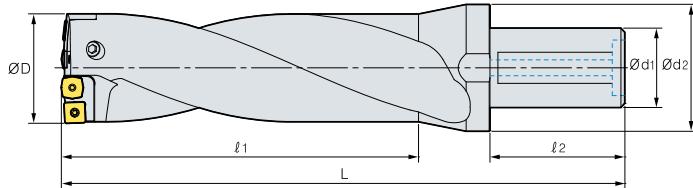

※ Adjusting washer adjusts the drilling diameter within 0.197inch.
